PROFESSIONAL SUMMARY

Full Stack Engineer with 7+ years of experience building and leading the development of enterprise-grade platforms across fintech, iGaming, e-commerce, banking, and transport domains. Proven track record of delivering projects from concept to production, driving technical decisions, and consistently raising the bar on performance, scalability, and reliability. Comfortable owning both backend architecture and frontend implementation — and equally at home presenting results to VPs and Directors as writing production-critical code under pressure.

EXPERIENCE

26b Studio

Software Engineer · Sofia, Bulgaria

March 2023 – Present (3+ years)

Deutsche Bahn — Railway Operations Platform

- Delivered high-performance backend services powering core railway operations across Deutsche Bahn's entire platform — built to handle the scale and reliability demands of one of Europe's largest rail networks.
- Implemented data processing pipelines following strict API specifications, handling complex railway domain data across synchronous (HTTP/REST), asynchronous, and message broker-based communication channels (Kafka).
- Designed and built services that operated seamlessly across mixed communication paradigms — real-time sync flows for operational queries and async/event-driven processing for high-throughput data ingestion and distribution.
- Contributed to architecture decisions on how distributed service components communicated, scaled, and maintained consistency across the platform under high load.
- Played a key role in technical planning and architectural decisions, shaping how distributed components communicate and scale across the platform.
- Led initiatives to improve CI/CD pipelines and automated testing coverage, reducing deployment risk and increasing release confidence across teams.
- Collaborated cross-functionally with infrastructure, QA, and domain teams to uphold strict SLA requirements and maintain stable production deployments in a safety-critical environment.

VisualVest — Banking & Investment Platform

- Delivered significant frontend and backend improvements to a regulated investment platform, enhancing both user-facing functionality and internal service reliability.
- Identified and resolved critical performance bottlenecks across backend services, measurably improving response times and overall system throughput.
- Contributed to enterprise integration layers connecting the platform with external financial services and data providers.
- Took ownership of complex feature development end-to-end — from design through implementation, testing, and production release.
- Influenced long-term platform direction through architecture reviews and technical decision-making alongside senior engineers.

Yotpo

Full Stack Developer → Frontend Team Lead · Sofia, Bulgaria

March 2021 – March 2023 (2 years)

Integration Center — New Platform, Built from Scratch (Frontend Team Lead)

- Promoted to Frontend Team Lead to spearhead Yotpo's Integration Center — a brand-new platform built from the ground up enabling seamless connectivity between Yotpo's suite and external enterprise services.
- Led the frontend architecture, established coding standards, reviewed critical PRs, and mentored engineers while remaining hands-on with complex implementations.
- Delivered major backend contributions alongside frontend leadership — designing and building integration APIs and middleware layers that powered data flow across the platform.
- Acted as the go-to resolver during high-stakes demos and client presentations — deploying hotfixes, resolving production issues on the fly, and ensuring flawless delivery in front of stakeholders and internal VPs.
- Coordinated directly with internal VPs and external client teams, translating technical constraints into clear decisions and managing expectations under tight deadlines.

Subscriptions Platform — Built from Scratch

- Co-led the development of Yotpo's Subscriptions platform from zero — a large-scale distributed system built on microservice architecture serving thousands of merchants.
- Personally delivered 88% of the entire frontend codebase and 35% of the backend, working at exceptional velocity while maintaining production-grade quality.
- Engineered deep, seamless Shopify integration, navigating its API constraints and lifecycle complexities to ensure a frictionless merchant experience.
- Presented the completed platform to Directors and VPs — the project was received as a major success, resulting in additional engineering teams being allocated to accelerate its growth.
- Contributed to architecture decisions, technical planning, and cross-team alignment throughout, working within a high-performing team of 5 engineers.

Codexio

Java Software Engineer · Sofia, Bulgaria

September 2018 – March 2021 (2 years 6 months)

iGaming & Fintech — Paysafe Platform

- Contributed to the scaling and stabilisation of Paysafe's payment infrastructure — a globally operating fintech platform processing high-volume, real-time financial transactions.
- Developed and optimised backend services handling transaction processing, user account management, and payment gateway integrations within a regulated, security-critical environment.
- Built and maintained iGaming platform features requiring sub-second response times and strict compliance with regulatory requirements across multiple markets.
- Worked across backend API design, database optimisation, and service communication within complex microservice environments.

Enterprise ERP System

- Designed and delivered a comprehensive ERP system covering HR management, inventory, procurement, financial reporting, and internal operations for a mid-to-large enterprise.
- Architected the full data model and backend service layer using Java, Spring Boot, and SQL, ensuring the system handled complex relational data and business logic at scale.
- Built the frontend interface end-to-end — delivering an intuitive, role-based UI enabling non-technical business users to manage day-to-day operations without friction.
- Led technical planning for the system's modular design, allowing independent teams to extend individual modules without disrupting core platform stability.
- Delivered the complete system from requirements through to production deployment, collaborating closely with business stakeholders throughout.

STY

Software Engineer Mentor · Sofia, Bulgaria

June 2022 – Present (4+ years)

- Mentored cohorts of software engineering interns through the Paysafe Bootcamp, introducing them to Full Stack development, backend fundamentals, Git workflows, and deployment practices.
- Guided junior engineers through real-world problem solving, helping build the technical confidence and professional habits needed to contribute to production codebases.

TECHNICAL SKILLS

Languages	Java · TypeScript · JavaScript · SQL · HTML · CSS · C++ · Assembler
Frameworks	Spring Boot · Angular · NestJS · React
Databases	PostgreSQL · MongoDB · Oracle · MySQL · Redis
Infrastructure	Docker · Kafka · CI/CD · Linux · Maven · Git · GitHub
Architecture	Microservices · REST APIs · OOP · AOP · Distributed Systems
Integrations	Shopify · OAuth · Socket.IO · Enterprise Middleware

EDUCATION

Software University

Software Engineer, Java Web Development · 2018

Professional High School of Electronics and Electrical Engineering (■■■■)

Microprocessors Technician · 2013 – 2017

· Microprocessor systems design, architecture, and low-level programming
